"Escherichia coli rpiA gene encoding ribose phosphate isomerase A.";
J. Bacteriol. 175:5628-5635(1993).
-1- FUNCTION: SPECIFIC INHIBITOR OF CHROMOSOMAL INITIATION OF
REPLICATION IN VITRO. BINDS THE THREE 13-MERS IN THE ORIGIN
(ORIC) TO BLOCK INITIATION OF REPLICATION.
-1- SUBUNIT: BEHAVES AS HOMODIMER IN SOLUTION.
REGULARITY: BELONGS TO THE LYSR FAMILY OF TRANSCRIPTIONAL
REGULATORS.

Nucleic Acids Res. 15:2137-2155(1987).
-!- FUNCTION: THIS PROTEIN ACTIVATES THE TRANSCRIPTION OF THE ILVC GENE IN THE PRESENCE OF ACETOLACTATE OR ACETOHYDROXYBUTYRATE.
ILVY IS ALSO A NEGATIVE REGULATOR OF ITS OWN EXPRESSION.
-!- SUBCELLULAR LOCATION: CYTOPLASMIC.
-!- SIMILARITY: BELONGS TO THE LYSR FAMILY OF TRANSCRIPTIONAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     171 DAYMYDGKLDWAAMPVLRFGPKDVLQDRDLDGRVDGPVGRRRVSI--------

Proc. Natl. Acad. Sci. U.S.A. 85:6602-6606(1988).
-! FUNCTION: INVOLVED IN REGULATION OF 3-CHILORCOATECHOL DEGRADATION.
-! TRANSCRIPTIONAL REGULATION OF TEDB EXPRESSION. ACTS AS A REPRESSOR IN THE ABSENCE OF ITS EFFECTOR (EITHER 2-CIS-CHLORODIENE LACTONE OR CHLOROMALEYLACETATE) BUT ACTS AS AN ACTIVATOR WHEN ITS EFFECTOR.
-! SUBCELLUAR LOCATION: CYTOPLASMIC.
-! SUBCELLUAR LOCATION: CYTOPLASMIC.
-! ADDLICATED GENE TFDR AND TFDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         64 VQAARKMVLLQA----ETKAQLSGRLAEIPLTIAINADSLSTWFPPVFNE-VASWGGATL 118
